
FERROUS Siberian larch decking

Woodmood Ferrous decking boards are made of Siberian larch, which is an extremely durable and weather resistant material for outdoor use. The wood has been tinted with a mixture of ferrous sulphate and pigment, instantly giving it a weathered grey tone and

protecting it against the effects of bacteria and fungi. Siberian larch is very durable in moist or wet environments due to its density and abundant tannin and resin content.

After finishing treatment, Siberian larch decking boards are weatherproof and almost maintenance-free. This makes larch the best choice for building a terrace.

The surface needs to be cleaned lightly every year, repeated finishing is not necessary.

The product is easy to install and already finished; it does not require any treating or additional protection for outdoor use. The greyish tone is achieved during production, and the material is also environmentally friendly.

- Species: Siberian larch
- Covered area (useful): 2.3 m² (4 pcs) per package
- Surface treatment: smooth, planed, finished using ferrous sulphate
- Colour: Old Look
- Profile: DECK
- Dimensions: 27 × 144 mm
- Cover width: 144 mm
- Length: 4000 mm (net length: 4000 mm)
- Package dimensions: 108 × 144 × 4000 mm
